Instant Script Wood Materials Palette

You can use any Sketchup materials for my extensions, but they must be loaded in order for the extensions to list them. These are some wood materials I've included that can be loaded from my menus. They come with Instant Cladding, Instant Fence and Railing, Instant Roof, Instant Wall and Instant Window.

*Click Extensions (or Plugins)/Vali Architects/Instant */Load Vali Architects Wood Materials*

These materials will now be loaded into your model and available for use with my extensions.
