

# Instant Roof Nui Installation

Windows installation is shown here, however it is identical for Macintosh. If you have a version of Sketchup that is older than SU8 M2, you will need to manually unzip the archive. If so, please use the contact form on my website to contact me and I'll send you instructions.

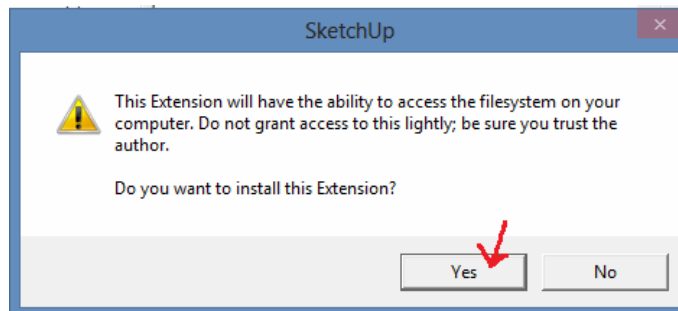

1. Download InstantRoofNuiInstall.rbz.
2. Start Sketchup. From the 'Preferences' menu, select "Install Extension".

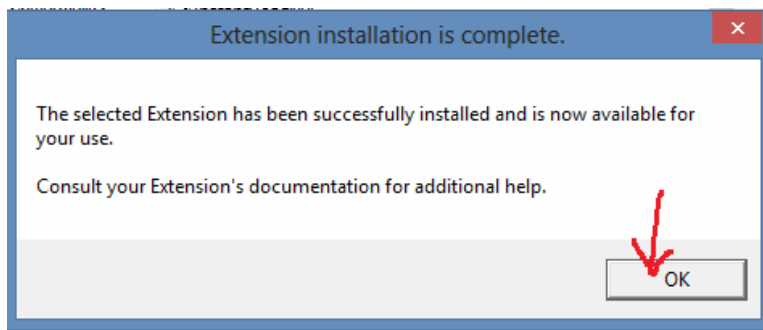

3. Navigate to the downloaded file and select it. Click "Open".

4. Click "Yes" and "OK" to install the Plugin.

6. Close and restart SketchUp. The script can be turned on or off under Preferences/Extensions.

To run the script, from the 'Plugins' menu, select Vali Architects/InstantRoofNui or use the Instant Roof Nui tool bar by checking "Instant Roof Nui" under "View/Toolbars"
