

Instant Roof

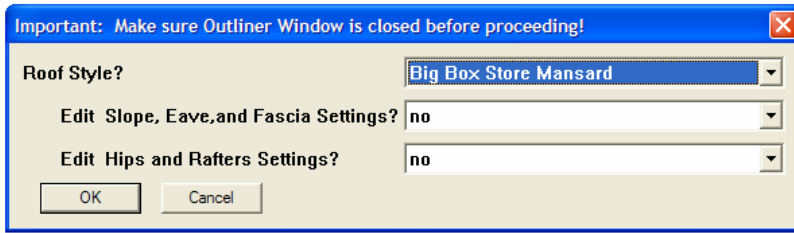

Example: Mansard Roof

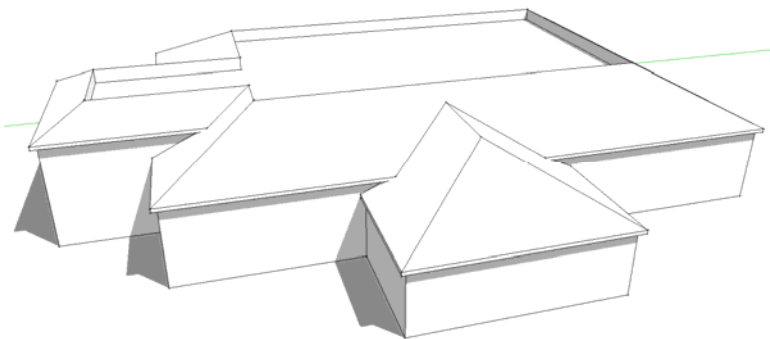

1. Draw some several attached boxes representing a building and select the top faces.

2. Choose “**Plugins/ Instant Roof/ Make Roof**”. In the pop-up menu, choose “**Big Box Store Mansard**” from the “**Roof Style?**” pull down menu.

3. Choose “**OK**” to accept default parameters and generate the roof. The height of the mansard is from highest of the selected faces.

4. Mansard roofs with different levels must be generated separately. Draw a separate building element as shown and select the face plus the edges against the main building. Repeat steps 2 and 3.
