

Instant Road

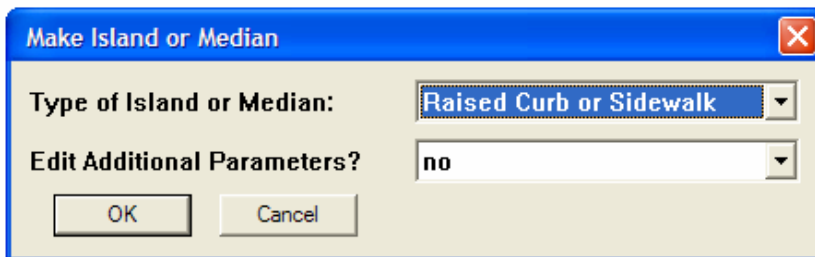

QuickStart Make Island or Median

1. Create a road using **InstantRoad**.
2. Make sure the road surface is active. (If the road is in a group or component, open the group or component for editing)
3. Draw a face in the shape of an island or median within the boundary of the road surface.
4. Select the face and make it into a group by choosing “**Edit/ Make Group**”
5. Select the road surface and the group.

6. Choose “**Plugins/ Instant Road / Make Island or Median**”. This menu will pop up:

7. Choose “**OK**” to accept default parameters and generate the road. The script should draw something like this:
